

JAVASCRIPT

Async/await

Objectives

In this exercise you will learn how to make use of modules in JavaScript.

Reference material

This exercise is based on material from the **JavascriptModules** chapter.

Overview

- In this lab you'll exercise exporting and importing JavaScript modules using code.

Estimated duration

The estimated duration for this lab is 30 minutes.

Completed solution

There is no completed solution for this lab.

Step by step instructions

1. Create a new website in VS Code or open an existing website you've been working on.
2. Create three new files in the **src** folder:
 - a) **formSubmit.js**
 - b) **validateName.js**
 - c) **validateEmail.js**
3. Place any appropriate functions and variables in the files from **index.js**.
 - a) Remember to include **import** statements where they need to be used but are not in the file.
 - b) Remember to include **export** statements, where they are needed externally, to the file.
4. Save all files and confirm that the rest of your code still works without needing any changes.
