

jQUERY

Set style

Objectives

In this exercise you'll use JQuery to set style.

Reference material

This exercise is based on material from the **Set style** chapter.

Overview

- In this exercise you will experiment with setting style in code.

Estimated duration

The estimated duration for this lab is 15 minutes.

Completed solution

There is a completed solution for this lab.

Step by step instructions

1. Open the project that worked on in the previous lab.
2. In the previous lab you used jQuery's **css** method to set the background colour of alternate items in the names list.
3. Modify the code to use the **addClass** jQuery function:
 - a. Add a style class to the page's style sheet. Give it an appropriate name, and set the style to match what you set using the **css** method in the last lab.
 - b. Replace the call to the **css** method – instead, use the **addClass** method to add the style you just created in the style sheet.
4. Run and test your code.

When you have time

1. If you haven't done so already, modify your code so that you chain your call to the **addClass** function at the same time as adding it to its parent `<div>`.
